Privacy Policy

Spooky Sweets: Candy Cauldron

Last updated: 15 October 2026

Privacy at a glance. The Game does not collect, transmit, sell or share personal or sensitive user data. Profiles, preferences, scores and gameplay statistics are stored only on the device.

1. About this policy

This Privacy Policy explains how Spooky Sweets: Candy Cauldron (the "Game", "we", "us" or "our") handles information when installed and played. The Game is intended for players of all ages, including children and families.

This policy applies to the Game, not the separate practices of the app store, device manufacturer or operating-system provider.

2. Information we collect

We do not collect personal or sensitive user data through the Game.

- No account or social-media login is required.
- The Game does not collect names, email addresses, telephone numbers, postal addresses, payment information or advertising identifiers.
- The Game does not request or track location, contacts, photographs, video, audio, messages, camera or microphone access.
- The Game does not use advertising, behavioural tracking, analytics or tracking cookies.

3. Information stored locally on the device

The Game may store optional player names, preferences, profiles, scores, gameplay statistics, progress and unlocked content locally on the device. This information does not leave the device, is not sent to us or an external server, and is not linked by us to a real-world identity.

4. How local gameplay information is used

Local gameplay information is used only to operate Game features, remember preferences, record progress, display unlocked content and maintain scores. It is not used for advertising, marketing, profiling or cross-app tracking.

5. Secure data handling

We use data minimisation: the Game is designed so personal and sensitive user data is not collected or transmitted.

- Local-only storage: gameplay information is stored within the Game's local app storage and is not uploaded to our servers.

- No network transfer by the Game: local gameplay information is not transmitted over the internet by us.
- Operating-system protection: access to local app storage is controlled by the device and operating system, including app isolation and device-security controls.
- Minimum access: the Game requests only the device access needed for its functions.
- No advertising or analytics SDKs: the Game does not integrate third-party ad networks, trackers or analytics tools.
- User-controlled deletion: players can remove local gameplay information by clearing app data or uninstalling the Game.

6. Sharing, sale and disclosure

We do not sell, rent, disclose or share personal or sensitive user data because the Game does not collect that data. Local gameplay information is not shared with advertisers, analytics providers or other third parties.

7. Advertising and third-party services

The Game is ad-free and does not use advertising identifiers, third-party ad networks or behavioural analytics. Standard technical data needed for app distribution and installation may be handled separately by Google Play Services under Google's own terms and privacy practices.

8. Children's privacy

The Game is designed for a general audience that includes children and families. The Game does not knowingly collect personal information from children and does not use children's information for advertising, profiling or marketing. A parent or guardian who believes information has been collected in connection with the Game may contact us using section 13.

9. Permissions and device access

The Game uses only the minimum device access required to operate and save gameplay information locally. It does not request access to location, contacts, camera, microphone or personal device files for gameplay.

10. Retention and deletion

Local gameplay information remains on the device until the player deletes it, clears the Game's app data, resets the Game where available, or uninstalls it. Because this information is not transmitted to or held by us, we cannot access, restore or remotely delete it.

11. International data transfers

The Game does not transfer personal or sensitive user data internationally because it does not collect or transmit that data.

12. Changes to this Privacy Policy

We may revise this Privacy Policy if the Game, its data practices or applicable requirements change. Any updated policy will show a revised "Last updated" date. If the Game begins collecting or transmitting personal or sensitive user data, this policy and relevant app-store disclosures will be updated as required.

13. Contact us

Questions, feedback or concerns about this policy or the Game's data practices can be sent to:
